

Slide out Menu with jQuery

I choose this plugin because it allows a small and less extravagant website to have flair. Not all small two to three page website need to be boring and not have much animation. This plug in allows you to gain interest and a cool look easily.

My Example site is a simple catering site as an example. Catering sites are mostly two to three page websites and can be boring. So to add flare to the site I used the slide out menu to gain fun and interest.
