Emily's Pizza

- Menu or Nav has a slide out effect (jQuery effect)
- Interactive map on the contact page with jquery effect on information change when clicking the dots.
- Two canvases giving announcements on the home page and other on the contact page.
- Two image galleries: one on the home page and other on the about page.

I choose the colors on Adobe Kuler. I chose to use a restaurant or pizzeria as my project because it was a good way to show that small time businesses just starting out can make their websites interesting. Yes I used the menu/nav effect again but I feel it gives a small business edge and a good look.

For all my photos I used: http://www.freeimages.com/
